

Triple Antibiotic Ointment

Procure Triple Antibiotic Ointment is a topical first aid medication that contains the active ingredients **Bacitracin, Neomycin and Polymyxin B**. The triple formula is used to treat and prevent bacterial skin infections, including minor cuts, scrapes, and burns.

The ointment works by killing or inhibiting the growth of bacteria, providing a protective barrier and promoting healing.

Benefits:

- Used to prevent and treat infections in minor cuts, scrapes, and burns.
- The combination of these antibiotics provides broad-spectrum coverage against a wide range of bacteria.
- The ointment helps promote healing by creating a protective barrier over the wound.
