

## Silicone Contact Layer Dressing

### Sterile Adhesive Mesh

**ProCure Silicone Contact Layer Dressing, Sterile Adhesive Mesh** is a gentle, non-adherent dressing designed to stick to intact skin while not adhering to the wound itself. Its porous mesh structure allows wound exudate to pass through to absorbent dressing materials, maintains a healthy healing environment. This dressing helps reduce pain and minimizes the risk of further damage to the wound during dressing changes. Comfortable and conformable, it provides optimal protection while ensuring ease of use for both patients and caregivers.

### ENHANCED PATIENT COMFORT

*Silicone wound dressing that is non-adherent to the wound, reducing secondary trauma. Provides protection to the wound bed during dressing changes.*

Not made with natural rubber latex.

### Features & Benefits:

- Soft, flexible silicone for gentle adherence
- Sterile and ready to use for safe wound care
- Ideal for use on sensitive skin or fragile wounds
- Non-stick, allowing for pain-free dressing changes
- Breathable material maintains a healthy healing environment
