

Non-Contact Infrared Thermometer

The **ProCure Non-Contact Infrared Thermometer** provides fast, non-invasive body temperature measurement without requiring direct contact with the patient. Using infrared technology, it delivers temperature readings in one second, helping reduce the risk of cross-contamination while supporting efficient patient screening and routine temperature monitoring.

In Forehead Mode, the thermometer automatically converts forehead temperature measurements to an oral-equivalent reading, eliminating the need for manual conversion. A color-coded backlit display provides clear visual indication of temperature readings in either Fahrenheit or Celsius, while the automatic 30-second shut-off helps conserve battery life. Simple point-and-measure operation allows for quick and convenient use in professional healthcare settings.

**Fast &
Easy to
Read**

Features & Benefits:

- Fast, accurate digital temperature measurement
- Results in 1 second
- Easy to read LCD screen
- 3-color backlit display
- Stores 30 readings
- Auto Shut-off
- Settings available in °C or °F
